REMOVAL FROM SERVICE												
Question	ΤΥ	N.	R	VILLI		omments						
Has the gearbox been	'	11	11			omments						
removed from service in												
accordance with QP9200?												
STORAGE BEFORE PREPARING FOR TRANSPORT												
Question	T Y	N	R			omments						
Has the gearbox been stored		- ' '	1.			Ommonio						
in accordance with QP9201?												
	<u> </u>	PR	FΡΔ	RING FO	OR TRANSPORT							
Question	ΙΥ	N	R			omments						
Has no work been performed		11	11			Ommonio						
other than that required	1											
preparing for transport?												
Are components that are like	ly	1										
to be damaged during												
transport protected with shiel	lds											
or removed?												
Are all removed components												
packaged to prevent damage	?											
Are all ports covered and												
sealed in a manner that												
prevents contamination?												
Has the breather been	.											
removed and the port plugge	ea											
and sealed in a manner that												
prevents contamination?	_											
Has breather been placed in plastic bag and packaged to	a											
prevent damage?												
Are all inspection ports												
securely fastened and sealed	4											
in a manner that prevents												
contamination?												
Is the oil filter in place? Has	it											
been protected with shields t	О											
prevent damage?												
Has the oil cooler been												
removed (optional)?												
Are all oil cooler ports on the												
gearbox been plugged and												
sealed in a manner that prevents contamination?												
Is the lubricant still in the												
gearbox (preferable)?												
If the lubricant is drained, is i	t											
in a clean oil drum?	`											
Has the lubricant oil drum be	en											
stored in a dry, temperature-												
controlled building?												
Have all labyrinth seals that		1										
are accessible from the												
gearbox exterior been sealed	t l											
with silicone rubber in a												
manner that prevents												
contamination?

Question	Υ	N	R			Comments				
Are all unpainted exterior					<u></u>					
surfaces coated with rust										
preventative?										
Are all shafts supported or										
locked from rotation such that										
the gear teeth contact on their	r									
backsides? Has the entire exterior of the										
gearbox been visually										
inspected to ensure there are										
no openings that would allow										
contamination?										
		STO	RAC	E BEFO	RE TRANSPOR	T				
Question	Y	N	R			Comments				
Has the gearbox been stored										
in accordance with QP9201?										
				TRAN	SPORT					
Question	Y	N	R		(Comments				
Have two samples of lubrican	t									
been taken from the gearbox										
immediately prior to loading o	n									
the truck?										
Are the lubricant samples properly stored?										
Is the truck equipped with air-										
ride suspension?										
As an alternate, is the gearbo	x									
supported on vibration										
isolators?										
Will the gearbox be										
transported in an enclosed										
truck?										
As an alternate, is the gearbo	×									
completely enclosed with a										
tarpaulin? Will the gearbox be										
transported immediately after										
loading is complete?										
Is the route direct?										
Will the schedule minimize										
time spent during transport?										
STORAGE AFTER TRANSPORT										
Question	Y	N	R		(Comments				
Will the gearbox be off-loaded	t									
immediately after arriving at										
the destination?										
Will the gearbox be stored in accordance with QP9201?										
accordance with QF9201?
